DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stevenson (USP 6737570).

Stevenson discloses an interactive personal audio device which comprises a microphone 70, music generation device 70, processing unit 45, and headphones 46. Applicant has amended the claims by adding the limitation of "a user interface ... configured to control the output signal of said processing unit by altering the amplification of at least one of the first and second input signals" and argues that Stevenson does not teach this limitation. In the art of musical instruments and audio electronics, this is commonly known as 'audio mixing.' However, Stevenson does in fact teach such mixing control. "Generated sounds from the sound generator 43 may then be mixed in a mixer 45 with the output from a digital to analog converter (DAC) 44a. Conventionally, the output from the DAC 44a may be the audio being played by an on-board audio player 70 or from the processor 38. The mixer 45 mixes the generated sounds, *developed in response to operator 40 inputs*, with an ongoing digital audio source from the DAC 44a or with an ongoing analog audio source 71. The mixer 45 outputs the mixed audio through an output buffer amplifier to

Art Unit: 2837

drive the headphones 46 or an audio line level output 53, in one embodiment." (Col. 3 lines 59-67) Stevenson then goes on to further state (Col. 4 lines 32-35) "Each of the operators 40 may be user programmable, in one embodiment, with a user selected sound or effect being generated in response to actuation of the operator 40."

Stevenson does not explicitly teach a headset comprising a microphone and a headphone in combination with the other elements. Official Notice is taken that the use of a headset, which comprises a microphone and a headphone, in combination with audio equipment or musical instruments is notoriously old and well-known in the art of audio equipment. It would have been obvious to one of ordinary skill in the art to adapt the teachings of Stevenson with such headset teachings, so as to allow the user the ability to have a hands-free musical performance.

Regarding Claims 7 and 13, Stevenson (applied here in a similar manner as above) discloses all features recited, but does not explicitly disclose the second microphone / receiving the third audio input as recited. It has been held that the mere duplication of working parts does not constitute nonobviousness (In re Harza, 274 F.2d 669, 124 USPQ 378 (CCPA 1960)). It would have been obvious to modify the teachings of Stevenson accordingly, so as to allow for more simultaneous users of the Stevenson device.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ng (USP 6328570).

Art Unit: 2837

Ng discloses a portable karaoke unit which comprises a microphone 144, music generation device 210, processing unit 250, and headphones. Applicant has amended the claims by adding the limitation of "a user interface ... configured to control the output signal of said processing unit by altering the amplification of at least one of the first and second input signals" and argues that Ng does not teach this limitation. In the art of musical instruments and audio electronics, this is commonly known as 'audio mixing.' However, Ng does in fact teach such mixing control. "Effects generator 250 receives voice data from the microphones and incorporates sound effects such as echo, reverb, and the like. The amount of echo, reverb, and volume is controlled by processor 210 according to user commands. Effects generator 250 also mixes the altered voice data with the output from sound module 240 and outputs the mixed sound through audio output port 140, headphone output port 142, and/or a radio frequency transmitter 245." (Col. 5 lines 57-64).

Ng does not explicitly teach a headset comprising a microphone and a headphone in combination with the other elements. Official Notice is taken that the use of a headset, which comprises a microphone and a headphone, in combination with audio equipment or musical instruments is notoriously old and well-known in the art of audio equipment. It would have been obvious to one of ordinary skill in the art to adapt the teachings of Ng with such headset teachings, so as to allow the user the ability to have a hands-free musical performance.

Art Unit: 2837

Regarding Claims 7 and 13, Ng (applied here in a similar manner as above) discloses all features recited, but does not explicitly disclose the second microphone / receiving the third audio input as recited. It has been held that the mere duplication of working parts does not constitute nonobviousness (In re Harza, 274 F.2d 669, 124 USPQ 378 (CCPA 1960)). It would have been obvious to modify the teachings of Ng accordingly, so as to allow for more simultaneous users of the Ng device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey Donels whose telephone number is 571-272-2061. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula Bradley can be reached on 571-272-2800 ext 37. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
